# FiddlerCap with Firefox

## Capturing web traffic logs with Firefox

Firefox does not automatically use the System Proxy. This means you must manually configure Firefox to use FiddlerCap.

## Firefox Configuration Instructions

1. Start Firefox.
2. Click **Tools > Options**.
3. Click the **Advanced** button on the top right. Click the **Network** tab.
4. Click the **Settings...** button.
5. Make a note of the settings on this screen.
6. Adjust the settings to the values shown in the image above. (Select **Use system proxy settings**).
7. Click **OK**.
8. When you're done capturing, go back to this screen and change the settings to the previous values.
